St. John Health System Lab Catalog

Von Willebrand Antigen, Multimeric Analysis

Order Name: VON W MULT
Test Number: 1502250
Revision Date: 12/12/2022

TEST NAME		M	ETHODOLOGY	LOINC CODE	
Von Willebrand Antigen, Multimeric Analysis		<u>"</u>	Vestern Blot	32217-2	
SPECIMEN REQUIRE	MENTS				
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	2 mL (1)	Plasma	Sodium Citrate 3.2% (Blue Top)	Frozen	
Instructions	Specimen Type: Blue-top (sodium citrate) tube				
	Specimen Storage: FREEZE				
	Specimen Collection: Blood should be collected in a blue-top tube containing 3.2% buffered sodium citrate.[1] Evacuated collection tubes must be				
	filled to completion to ensure a proper blood to anticoagulant ratio.[2,3] The sample should be mixed immediately by gentle inversion at least 6 times to ensure adequate mixing of the anticoagulant with the blood. A discard tube is not required prior to collection of coagulation samples.[4,5] When noncitrate tubes are collected for other tests, collect sterile and nonadditive (red-top) tubes prior to citrate (blue-top) tubes. Any tube containing an				
	alternate anticoagulant should be collected after the blue-top tube. Gel-barrier tubes and serum tubes with clot initiators should also be collected after				
	the citrate tubes. Centrifuge and (using a plastic transfer pipette) carefully remove the plasma without disturbing the cells. Transfer the plasma into a				
	LabCorp PP transpak frozen purple tube with screw cap (LabCorp ID 23751). The specimen should be FROZEN immediately and maintained				
	frozen until tested. To avoid delays in turnaround time when requesting multiple tests on frozen samples, please submit separate frozen				
	for each test requested.				

GENERAL INFORMATION	
Expected TAT	4 - 11 days
CPT Code(s)	85247
Service Provided By	labcorp Oklahoma, Inc.

Special Instructions: Testing is performed at Esoterix Coagulation Laboratory: UY#300117
