Specimen Stability: Ambient: 14 days, Refrigerated : 14 days, Frozen: 14 days

anticoagulants is NOT recommended.

Cholinesterase, Plasma

Order Name: CHOLINES P
Test Number: 3600925
Revision Date: 12/12/2022

TEST NAME			METHODOLOGY	LOINC CODE	
Cholinesterase, Plasma			Kinetic Spectrophotometric		
SPECIMEN REQUIRE	MENTS				
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	1 mL (0.5)	Plasma	EDTA (Lavender Top)	Room Temperature	
Instructions	Specimen Type: Lavender-top (EDTA) tube Specimen Storage: Room temperature Specimen Collection: Separate plasma from cells immediately and place in transport tube. Mark transport tube "plasma". Use of other				

GENERAL INFORMATION		
Expected TAT	2 - 4 days	
Clinical Use	Approximately 1 in every 2500 individuals has inherited defective or deficiency of the enzyme (pseudocholinesterase) that metabolizes succinylcholine (a anesthetic agent). With "normal" dosage, these individuals have prolonged apnea. Such individuals are responsive at much smaller concentrations of this anesthetic agent than the general population. Low concentrations of Pseudocholinesterase are observed in individuals exposed to organophosphorous insecticides and patients with hepatic dysfunction.
