## St. John Health System Lab Catalog

Adenosine Deaminase, Pleural Fluid

Order Name: ADENO DEAM

Test Number: 3660750 Revision Date: 12/12/2022

TEST NAME		METH	DDOLOGY	LOINC CODE	
Adenosine Deaminase, Pleural Fluid		Quant	tative Spectrophotometry	35704-6	
SPECIMEN REQUIREMENTS					
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	0.5 mL (0.2 mL)	Pleural Fluid	Sterile Screwtop Container	Frozen	
Instructions	Specimen Type: Sterile Container  Specimen Storage: Frozen  Specimen Collection: Collect specimens in leak-proof container.  Special Instructions: Testing referred to ARUP TC 3002978  Specimen Stability: Ambient: 24 hours, Refrigerated: 1 week, Frozen: 1 month				

GENERAL INFORMATION		
Expected TAT	3-8 Days	
Clinical Use	Adenosine deaminase (ADA) is an endogenous tissue enzyme which is released into the serum in patients with many different types of malignancies and infections, including viral hepatitis, infectious mononucleosis, typhoid fever, and tuberculosis. It is the most useful single test in portal hypertension (ascites) associated with liver cirrhosis. In pleural fluid, elevated ADA levels are very commonly associated with tuberculosis, although increased ADA activity may be found in effusions due to a number of causes, including TB, bacterial infections, rheumatologic disease, and lymphoproliferative disorders. In CSF, ADA is elevated in cases of tuberculous meningitis.
