

BCR/ABL Gene Rearrangement Quantitative by PCR

Order Name: BCRABL PCR

Test Number: 9101855
Revision Date: 10/01/2022

TEST NAME		METH	ODOLOGY	LOINC CODE
BCR/ABL Gene Rearrangement Quantitative by PCR		Polym	erase Chain Reaction	
SPECIMEN REQUIREM	IENTS			
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment
Preferred	5 mL (3 mL)	Whole Blood	EDTA (Lavender Top)	Refrigerated
Instructions	For Best results: Send specimens for testing ASAP. Specimens not going to be tested immediately should be stored refrigerated, specimens kept at room temperature will degrade faster than those kept refrigerated. Frozen samples will be rejected. CRITICAL: Do not open or share tube!			

Stability: Ambient 1 day(s), Refrigerated 2 day(s), Frozen: Unacceptable.

GENERAL INFORMATION		
Testing Schedule	Monday and Thursday	
Expected TAT	Within 7 day(s)	
Clinical Use	The bcr/abl rearrangement is detected in 90 to 95% of CML, some acute lymphocytic leukemia (ALL), and, rarely, in acute myelogenous leukemia (AML). Diagnose chronic myelogenous leukemia (CML) in the presence or absence of Philadelphia chromosome. Determine prognosis & relapse. Also used to identify acute lymphocytic leukemia (ALL) patients who have a Philadelphia chromosome.	
Notes	The bcr/abl gene rearrangement is observed in CML, ALL, and AML. A negative result indicates fewer than 1 leukemic cell per 10,000 normal cells. This test detects only the bcr/abl translocation. It will not detect other translocations that may appear in the terminal phase of CML.	
CPT Code(s)	81206, 81207, G0452-26 (can be a combination or all 3 codes)
