

**Tobramycin Peak**

Order Name: **TOBRA PEAK**  
 Test Number: 4005600  
 Revision Date: 09/20/2017

| TEST NAME       | METHODOLOGY        | LOINC CODE |
|-----------------|--------------------|------------|
| Tobramycin Peak | Enzyme Immunoassay | 4057-6     |

**SPECIMEN REQUIREMENTS**

|              |                                                                                                                                 |               |                                              |                       |
|--------------|---------------------------------------------------------------------------------------------------------------------------------|---------------|----------------------------------------------|-----------------------|
| Specimen     | Specimen Volume (min)                                                                                                           | Specimen Type | Specimen Container                           | Transport Environment |
| Preferred    | <b>1 mL (0.5)</b>                                                                                                               | <b>Plasma</b> | <b>Lithium Heparin PST (Light Green Top)</b> | <b>Refrigerated</b>   |
| Alternate 1  | <b>1 mL (0.5)</b>                                                                                                               | <b>Serum</b>  | <b>Clot Activator SST</b>                    | <b>Refrigerated</b>   |
| Instructions | Peak: draw 30-60 minutes after 30 minutes infusion or 1 hour after IM dose.<br>Stability: Ambient=8 hours; Refrigerated= 7 days |               |                                              |                       |

**GENERAL INFORMATION**

|                     |                                                                                                                      |
|---------------------|----------------------------------------------------------------------------------------------------------------------|
| Testing Schedule    | Daily                                                                                                                |
| Expected TAT        | 1-2 days                                                                                                             |
| Clinical Use        | Useful for optimizing drug dosage and assessing toxicity.                                                            |
