

Hepatic Iron Determination (Iron Tissue, Iron Tx)

Order Name: **IRON TX**
Test Number: **9905750**
Revision Date: 10/01/2023

TEST NAME	METHODOLOGY	LOINC CODE
Hepatic Iron Determination (Iron Tissue, Iron Tx)	<u>Quantitative Inductively Coupled Plasma-Mass Spectrometry</u>	See Below

SPECIMEN REQUIREMENTS				
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment
Preferred	1 cm	Tissue	Sterile Screwtop Container	Refrigerated
Instructions	<p>Specimen Type: Metal free vial or polypropylene tube</p> <p>Specimen Storage: Refrigerate</p> <p>Specimen Collection: Specimen (obtained with an 18 gauge needle) at 2-8(degrees)C Tissue can be fresh, paraffin-embedded, formalin-fixed, or dried.</p> <p>Special Instructions: Testing referred to ARUP Y8#28250</p> <p>Specimen Stability: Ambient: Paraffin block, formalin, or dried: Indefinitely, Refrigerated : Paraffin block, formalin, or dried: Indefinitely F, Frozen: Paraffin block, formalin, or dried: Indefinitely F</p>			

GENERAL INFORMATION

Expected TAT

8-15 days

Notes

RESULT CODE	RESULT NAME	LOINC
22127611	Iron Tissue Weight	29638-4
9905600	Iron Level Liver Tissue	15357-7
9905700	Iron Index	49061-5
